

New!

SOLAR HYDROGEN GENERATION SET

Freedom to invent your own clean energy applications using fuel cells and renewable hydrogen formed using sun and water.

This new set is an optimal tool for creativity and education in classrooms and student competitions.

Solar Hydrogen Generation Set

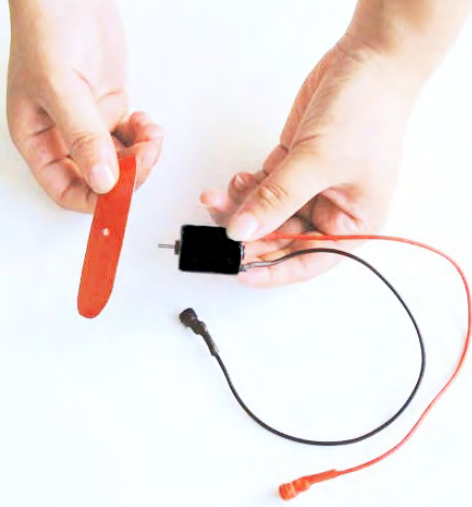

Discover how to produce, store and use the clean energy of the future!

Around the world scientists and researchers are looking to find new ways to meet our growing energy needs without further damaging our environment or endangering our planet. One alternative is hydrogen, which can be created using clean, renewable sources such as wind and solar power. Using a process called electrolysis, water can be used to form Hydrogen. Fuel Cells can then convert hydrogen to electrical energy to power anything from vehicles and homes to electronic devices.

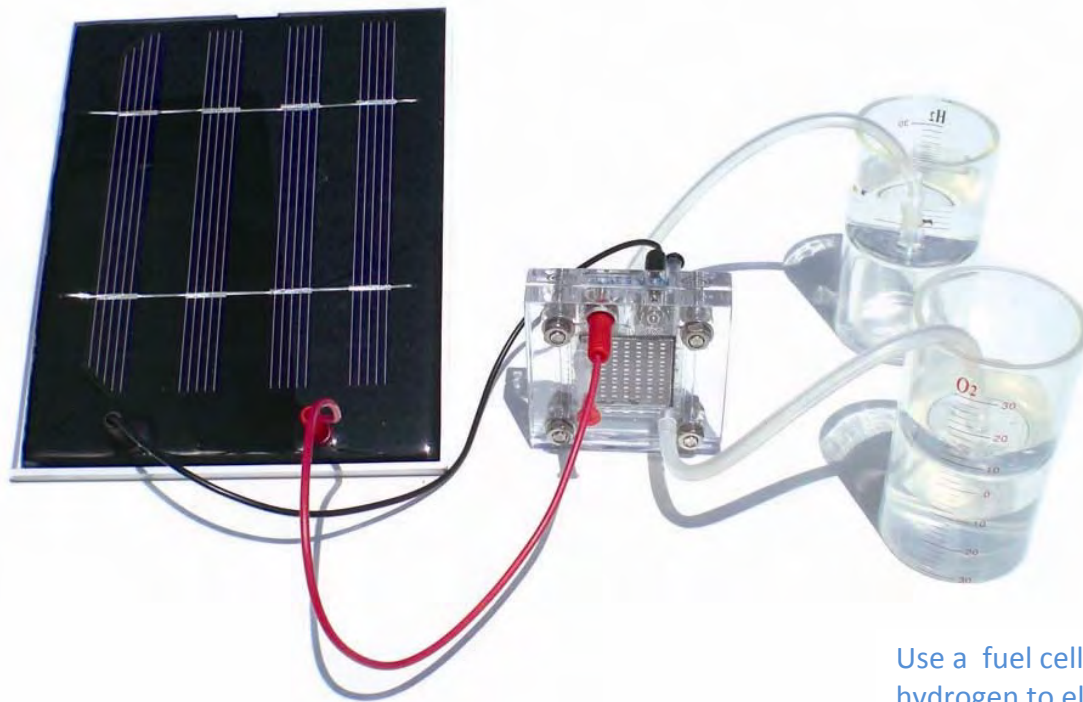

This Solar Hydrogen Generation Set is conveniently designed to bring the latest research out of the laboratories and into your hands - so that you too can join the global scientific community in bringing the world into the Hydrogen Age.

SOLAR HYDROGEN GENERATION SET

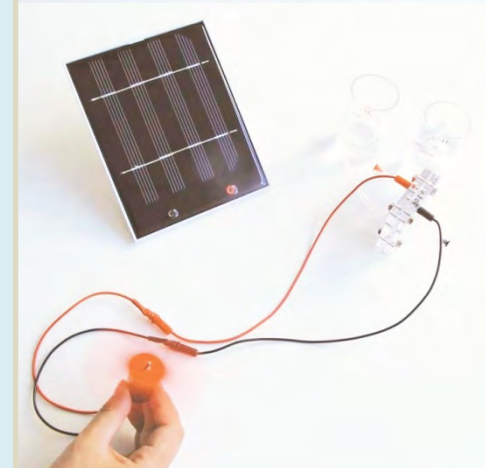

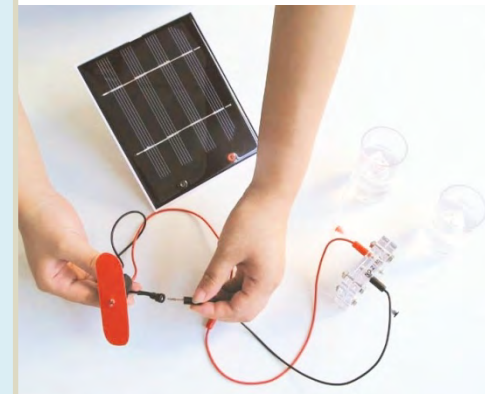

Invent your own power applications using clean energy!

Included small motor can be used to build a small fan

Use a fuel cell to convert hydrogen to electricity to power your applications.

SOLAR HYDROGEN GENERATION SET

Invent your own
power applications
using clean energy!
