

NEW!

Clean energy science kits by

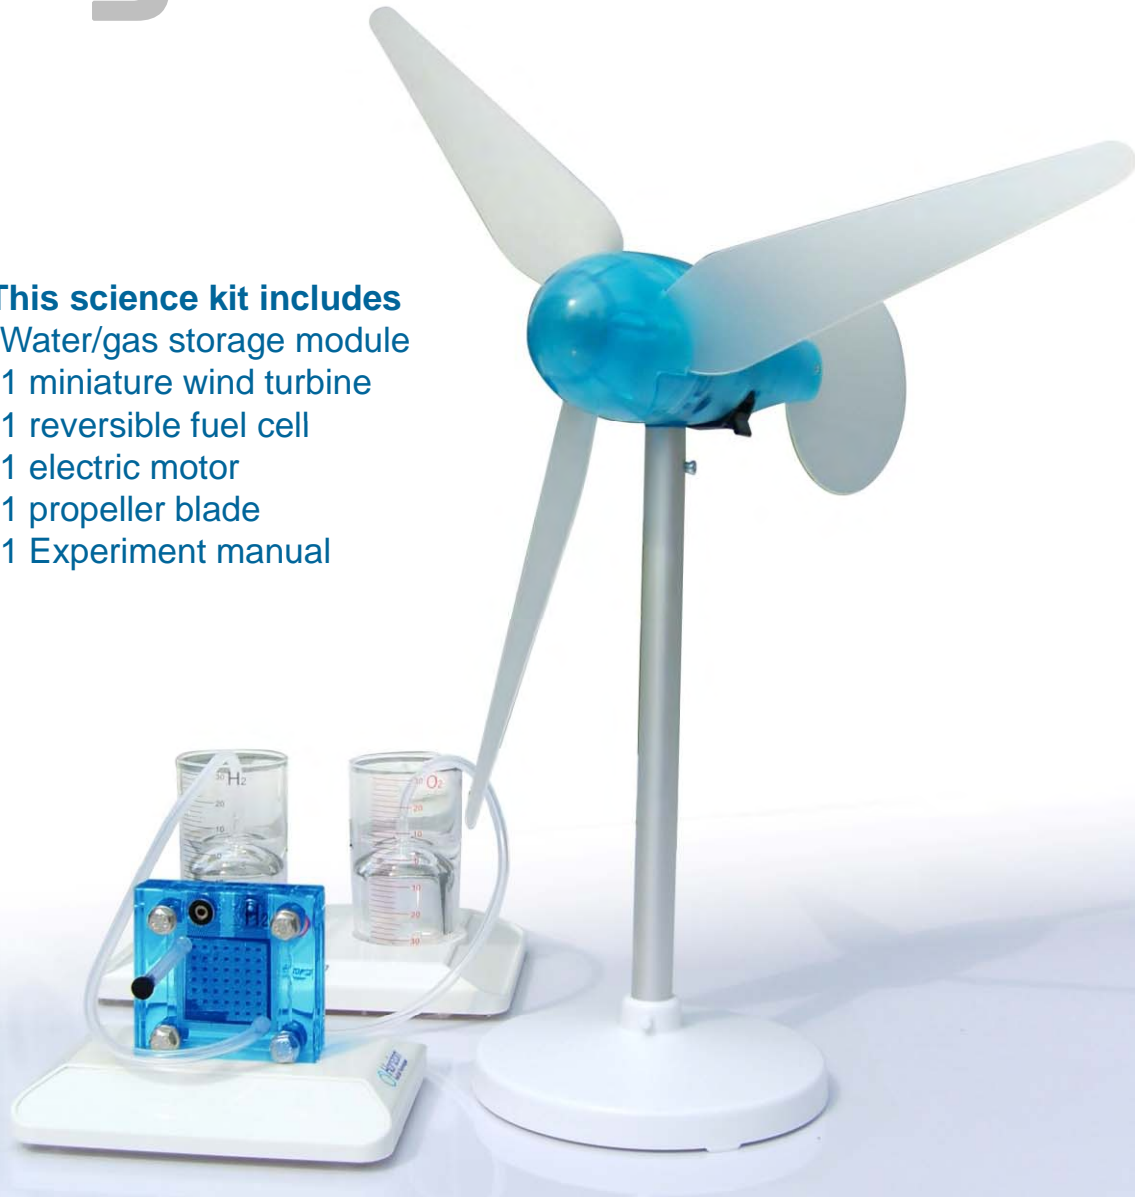

Hydro-Wind Kit

- Learn about wind energy
- Create hydrogen using wind & water
- Use fuel cells to power your inventions

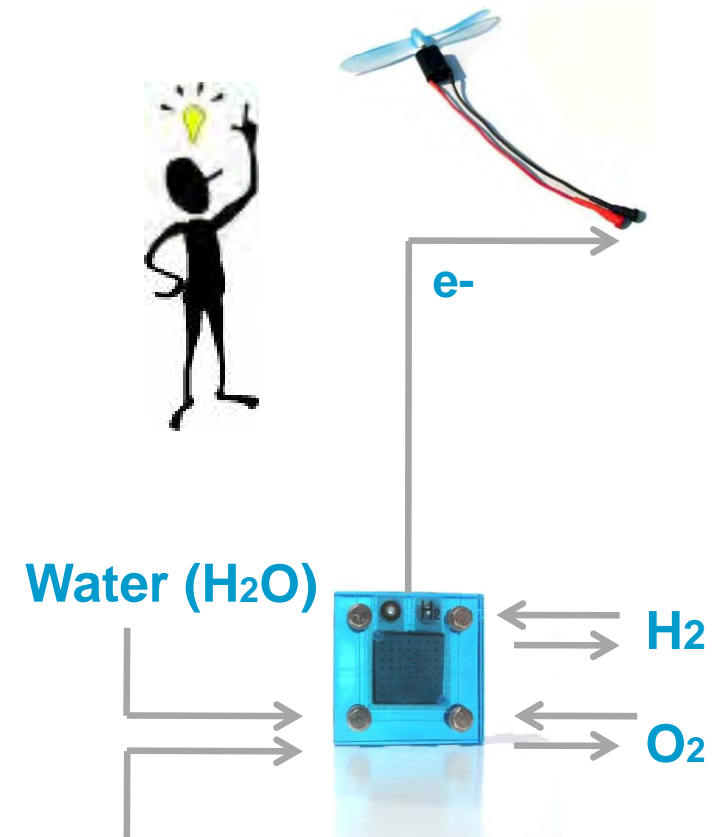

Hydro-Wind Kit

- This science kit includes
- Water/gas storage module
 - 1 miniature wind turbine
 - 1 reversible fuel cell
 - 1 electric motor
 - 1 propeller blade
 - 1 Experiment manual

Experiment with
Wind-generated hydrogen...

...power your own ideas

Freedom to invent your own clean energy applications using fuel cells and renewable hydrogen formed using energy from the wind. This new set is an optimal tool for creativity and education in classrooms and student competitions.

Hydro-Wind Kit

Capture wind energy using hydrogen fuel cells

(Compatible with Horizon's software adaptor kit for PC connection)

Now available! Contact dane@horizonfuelcell.com

The Hydro-Wind Kit comes complete with a reversible fuel cell. As an electrolyzer, the device can convert and store energy from wind as hydrogen from water. As a fuel cell, the same device can convert the stored energy back to electricity to power a small motor. A small motor with a propeller blade is included to help get started to design your own scientific demonstrations.
