

Genecon and Static Genecon

What is the output of your original 'Blue Genecon'? Is it 12V DC? What is the amps probably reported in mA? Thank you

The original 'Blue Genecon' (N99-B10-2631) is rated to output 6V DC with approximately 200mA of usable current.

The new [Genecon12 \(N99-B10-2632\)](#) is capable of outputting up to 12V DC and up to approximately 500mA.

Additionally we carry replacement parts for the original 'Blue Genecon'. We have [replacement gears \(N99-B10-2631-LMS\)](#) as well as [replacement cords \(N99-B10-2632-50\)](#) with a updated design for enhanced durability.
