

V6 Gas Engine with Carburetor - Electrical Operation

N98-ND5190

This product is a cut-away of a V6 gas engine with twin-body carburetor. It is carefully sectioned for training purposes and professionally painted with different colors to better differentiate the various parts, cross-sections, lubricating circuits, fuel system, cooling system, and other key components. The engine operates electrically at 120 volts and runs at a reduced speed to allow students to be able to easily understand and observe the operation of the various mechanical parts. Many parts have been chromium plated and galvanized for a longer life. It operates electrically, and it is mounted on a stand with wheels.

SPECIFICATIONS

- V6
- Displacement: 2,800/3,200cc
- Single overhead camshaft SOHC (1 cam per head)
- Twin barrel carburetor
- Centrifugal water pump
- 12 volt alternator
- Membrane clutch
- Operates electrically at 120V
- Mounted on stand with wheels

WEIGHT AND DIMENSIONS

120cm x 60cm x 100cm (L x W x H)

Net Weight: 190 kg

Gross Weight: 260 kg

OPERATES
ELECTRICALLY

MOUNTED ON STAND
WITH WHEELS
